## Jake Armendariz

### EDUCATION

Bachelor of Science in Computer Science, UC Santa Cruz 09/2018-06/2022

- 3.8 GPA: Scholars Program
- Courses in Distributed Systems, System Design, Networking, Algorithms, and Physics.

Graduated from Leigh High School 2018

- Valedictorian of 400+ person class

### WORK EXPERIENCE

CDK Global - Software Engineering Intern Summer 2020

- Engineered a backend in Flask that connects car dealerships with Fortellis API to retrieve and display their vehicle inventory, information, and images. Helping CDK compete with online retailers such as Carvana.
- Accelerated the development process by implementing a python script to connect Jira tests with the development environment.

Seastead Digital - Software Engineering Intern July 2019-February 2020

- Implemented contact page, parts of the administration panel, and fixed bugs in PHP.
- Consulted with a remote team in Europe to delegate tasks and project goals.

### RELEVANT PROJECTS

HTTP server and load balancer

- Designed and implemented a multi-threaded HTTP server and load balancer in C capable of distributing concurrent requests safely and efficiently.

Multiplayer Online Game in Rust

- Implemented game mechanics including player health, object collision, attacks, and movement coordination which is synchronized via an actix web socket server.
- Rendering is done on the client end, reducing server load to maximize the number of client connections.

Node.js Notification Server

- Implemented a web server for a chat app to send web-push and mobile notifications.
- Receives messages with Braid.js (a CRDT with the web) and distributes notifications with https and FCM.
- Currently being used by the Braid.js team to build and communicate ideas and work during development.

Charity Cloud

- Spearheaded a hackathon team to build a Flask application that helps users find reliable information and statistics on charities.

Personal Website

- Implemented a Flask website with secure storage of users' information, high scores and data for my blog.
- Developed a server and interface to allow users to interact with their running/biking data via Strava's rest API to collect, compare, and sort relevant activities.

### SKILLS

- Programming Languages: Python, C, Java & Rust
- Experience with: C++, Javascript, Tensorflow, Flask, React & Node.js
- Tools: Unix, Linux & Git
